

STOP using a TV or radio to mask speech!

Improve Your HIPPA Compliance

- *Fines from \$100 to \$50,000 per incident.*

Improve Your HCAHPS Ratings

- *Patients who reported that the area around their room was "always" quiet at night.*

Sound masking is the addition of an uniform background sound, similar to airflow or "pink noise", to reduce the intelligibility of human speech. The resulting environment leads to increased privacy, improved worker performance, enhanced productivity and greater worker comfort.

Cambridge Sound Management, LLC (CSM) offers innovative, simple and intelligently engineered solutions to the problems of privacy and acoustic distractions. Our Qt Quiet Technology sound masking systems combine exceptional audio performance, low impact installation, and affordability.

DAB Communications specializes in Qt Quiet Technology™ in-ceiling sound masking systems sales and installation for offices and businesses in virtually any space from small offices to large, multi-floor buildings.

Qt Quiet Technology

Qt Quiet Technology sound masking systems enhance privacy and reduce distractions in virtually any space from small offices to large, multi-floor buildings. Combined with integrated paging and music functionality, Qt systems are a complete 3-in-1 solution for creating better acoustic environment.

uniform and comfortable

The Qt system provides a uniform blanket of sound coverage throughout the workspace and is unaffected by ceiling design and the many obstructions that often litter the plenum. The sound is transmitted as four uncorrelated channels, creating a more pleasant and comfortable masking sound.

energy efficient

The Qt system is the most environmentally friendly sound masking system on the market. All Qt systems are GreenSpec listed and can contribute to LEED certification scores by improving the acoustic environment and mitigating acoustic challenges created by other LEED requirements.

"Maintaining speech privacy in healthcare settings helps reduce medical errors as it supports open conversations among patients, families, and Patient Care Teams (PCTs) resulting in increased patient satisfaction."
